DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1-33, 45-51 are rejected under 35 U.S.C. § 102(e) as being anticipated by Murcia et al. (U.S. 6,270,187)

Murcia et al. (see reassigning means, fig.8; see also abstract) discloses every element of the instant claimed invention including different operation approaches by supplementing ink for one of the failed nozzles.

One approach is to print in supplementation in a different manner, for example, in substantially one single pass mode or maybe in multipass mode, thereby to effect the throughput of the print image.

Another approach is to print in supplementation the same color as the failed nozzle(s).

Art Unit: 2861

Yet another approach is to assign a print nozzle preferably next to the failed nozzle.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 34-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murcia et al. in view of Hermanson. (U.S. 5,581,284)

Murcia et al. teach the instant claimed apparatus and method of printing for compensating nozzles failure except for printing the black ink in substitution for the non-operative nozzles corresponding to non-black color recording ink.

Hermanson teaches detecting the problem nozzle and compensating the missing dot corresponding to the problem nozzle with ink of different color. For example, black ink can be filled in for missing cyan or magenta droplets. Therefore, It would have been obvious to one of ordinary skill in the art at the time the invention was made to substitute the missing non-black color ink with the black color ink in Murcia et al. as taught by Hermanson for preventing the missing spot and providing adequate printing quality.

Response to Amendment

Applicant's amendment filed November 5, 2002 have been fully considered. However, arguments with respect to claims 1-51 are moot in view of the newly

Art Unit: 2861

discovered reference to Murcia et al. and Hermanson as noted in the above new ground(s) of rejections.
